

Urban Growth Area Element

The Growth Management Act says that future growth should be located in areas that already have public facilities like sewers - Port Townsend or Port Ludlow, or in areas that will have those services in the future, like Port Hadlock – Irondale.

The purpose of the Urban Growth Area Element is to identify specific uses, densities and development regulations for the UGA.

What about this element is most important or stands out for you and why?

Current UGA Goals:

1. Encourage a balance of commercial and industrial uses for urban-scale and regional-scale economic activities within Urban Growth Areas (UGAs).
2. Provide for the orderly development of urban land uses in urban growth areas consistent with the provision of adequate and feasible urban levels of public facilities and services.
3. Limit the establishment or expansion of urban-level development and infrastructure to Urban Growth Areas and Master Planned Resorts.
4. Minimize the adverse effects on ground and surface water quality and quantity and protect aquatic resources and habitats from stormwater runoff generated within the Irondale and Port Hadlock UGA.
5. Encourage efficient multimodal transportation systems that are based on regional priorities and coordinated with county and city comprehensive plans.

Which one of these goals is most important or stands out for you and why?

What would you like to see changed or added and why?

How might we do that?
